Research Progress Form .................................................................................................................. A-1
PhD Student Annual Progress Report ............................................................................................. B-1
Welcome

The mission of the Department of Electrical and Computer Engineering is to provide our students with educational experiences that give them a sound basis for professional practice, advanced education, and lifelong learning. At its core is the goal that students learn the fundamental principles of electrical and computer engineering and master engineering methods to solve challenging and diverse problems. Further, the department strives to have each student develop the leadership and communications skills necessary to relate these solutions to both technical and non-technical communities. The faculty is dedicated to accomplishing this mission through the integration of teaching and research.

This handbook is meant to help familiarize you with our department, faculty, and staff; and answer questions that you may have or direct you to other resources for further assistance and information. In addition to this document, the Tufts Graduate Student Handbook is invaluable in detailing the procedures and paperwork associated with completing your degree requirements successfully. Please keep both sources of information handy and refer to them frequently.
1 Graduate Programs of Study

The Department of Electrical and Computer Engineering in the School of Engineering at Tufts University offers programs of study leading to the Master of Science (MS) and the Doctor of Philosophy (PhD) Degrees. We are a growing interdisciplinary engineering department with a focus on research and education in a wide variety of sub-disciplines, all of which are discussed in depth on our web site. The department gives students a unique perspective on how electrical and computer technology can be used to solve important human problems. With expert faculty, cutting-edge research, and innovative facilities, our students are given the opportunity and resources to make significant contributions to the field and become leaders in industry, government, and academia.

The department has particular strengths in the areas of materials science, computer engineering, microfabrication, VLSI design, signal processing, communication theory, electro-optics, and microwave theory, with newer facilities for research in emerging areas of bio- and nano-technology. In addition, other departments in the School of Engineering offer programs in distinctive specialties, including additional efforts in biotechnology, environmental health, hazardous materials management, product engineering, human factors, multimedia, and biomedical optics. The Tufts Graduate School also offers an interdisciplinary doctoral program that allows students to devise their course of study.

1.1 Master of Science

The department offers a program leading to the MS degree in Electrical Engineering. This degree provides the opportunity for research and education in a wide variety of sub-disciplines. The department also offers a specialized track within the M.S. degree in bioengineering offered by Tufts School of Engineering. The Signals and Systems track educates biotechnology engineers in the analysis and processing of signals with an emphasis on biomedical image processing and image formation, as well as the design, control and synthesis of systems for biotechnology.

The Masters of Science degree requires ten credits, usually one credit per course. All courses must be at the 100 level or above. For full-time students, at least seven credits must be from advisor approved courses. One additional credit must be the Electrical Engineering Seminar. The two remaining credits can be composed of course credits, an MS thesis, MS project, or internship credits, selected with advisors consent. The path chosen must be agreed upon by the student’s advisor. Grades in all courses must be B- or better. Typical programs for the non-thesis and thesis-based options are outlined in the following tables:

<table>
<thead>
<tr>
<th>Semester 1 (Fall): 5 credits</th>
<th>Semester 2 (Spring): 5 credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>4 credits of course work¹</td>
<td>4 credits of course work¹</td>
</tr>
<tr>
<td>0.5 credit EE Seminar (EE-191)</td>
<td>0.5 credit EE Seminar (EE-191)</td>
</tr>
<tr>
<td>0.5 credit elective²</td>
<td>0.5 credit elective²</td>
</tr>
</tbody>
</table>

¹Course work may include up to two credits of internship or a one credit master's project. At least a total of six of the credits must be from EE.
²The elective credit can be used for an internship, a course, or an independent study.
Students should be aware that the scope of a master's thesis is much more involved than a master's project and it is not always possible to complete the work within a tight schedule, or predict in advance how long it might take. We, therefore, advise that those wishing to write a thesis take an optimistic, but cautious strategy. This means starting work on your project/thesis early enough in your studies. One possibility, for those starting in the fall semester and planning to spend two years at Tufts, is to take 5–7 courses over the first two semesters.

Ideally, one would seek project/thesis ideas during the second semester and do some background reading and even start actual work in the summer. In this way, a substantial amount of work will already be done during the summer and fall. The final approved thesis or dissertation must be submitted online. Please refer to the graduate student handbook for graduation information and deadlines.

For students who intend to continue studying towards a Ph.D. this provides an excellent opportunity to identify topics of interest and potential supervisors within the time frame of the master's degree.

1.2 Doctor of Philosophy

The department offers a program leading to the Ph.D. in electrical engineering. Students in the program must already have a Bachelor’s of Science degree in electrical and computer engineering or a related field. High achieving applicants to the Ph.D. program who do not have the M.S. degree may be considered for admission to the direct-to-PhD program. This is an accelerated program for advanced students who are deemed able to handle the rigors of PhD research with a lower requirement for introductory coursework. Applicants without a M.S. degree who are not accepted into the Direct-to-PhD program are automatically considered for admission as an M.S./Ph.D. student, where they will be expected to complete the Master of Science degree program, and on completion of that program will be considered for admission to the Ph.D. program.

The department differentiates between admission to the PhD program and PhD candidacy. No students are accepted as formal doctoral candidates until they have: (a) identified a faculty member who has agreed to be their dissertation supervisor; (b) exhibited merit through a qualifying examination process; and (c) successfully defended a PhD proposal. The qualifying examination must be taken within one academic year of admission to the PhD program (within two academic years for part-time students, see Table 2), unless delayed with the advisor’s permission.

Doctoral candidates are expected to plan a program of research under the direction of their advisor and with the guidance of a Research Committee (RC). The timeline for the degree is provided in Table 2, while the various terms and processes are discussed in detail below.
Ph.D. students in electrical engineering must take at least eighteen credits beyond the M.S. degree. These credits include a minimum of six credits of lecture-based class work, two credits of Electrical Engineering Seminar, and a dissertation. The dissertation effort is usually assigned ten credits. At least one credit of class-based course work must be taken from outside the field of electrical and computer engineering.

M.S./PhD students are required to fulfill all of the requirements of both the M.S. and PhD programs, a full 28 credits. Students in the Direct-to-PhD program have a reduced credit requirement of 23 credits. Direct-to-PhD students need to complete ten credits of lecture-based class work, one additional lecture-based class credit from outside of the department, two credits of Electrical Engineering Seminar, and 10 dissertation credits.

Typical areas available for dissertations include solid-state materials with an emphasis on optoelectronic and solar energy applications, microwave devices and systems, power systems and control, electromagnetics, antennas, plasma engineering, signal and image processing, VLSI and mixed-analog integrated circuits, microprocessor applications, computer architecture, communication systems, information theory, computer and wireless networks, and power electronics.

**Advisor:** Each PhD student should start under the guidance of an advisor approved by the ECE department. The student will do research under the direction of the advisor, write a dissertation about that work, have it read by a dissertation committee (see below) and defend the work in an oral presentation to the committee and all who are interested.

**Research Committee:** By the end of their second semester at Tufts, all graduate students planning on completing a PhD in the ECE department (whether they started with a BS, MS, or equivalent) and with consultation of their advisor must assemble a Research Committee (RC) that consists of three people: 1) the advisor; 2) another ECE faculty member in the same, or a similar, area of study; and 3) a third unrestricted member (faculty or equivalent), inside/outside ECE or outside Tufts, who is chosen by the advisor and student. Graduate students must meet with their research committee each year to assess their progress between the 1st of May and the 15th of September. At this meeting, the research committee will complete a Research Progress Form (available in the Appendices) after spending 30-60 minutes with the student discussing their progress over the past year. The format of this discussion is at the discretion of the committee. One example could be a 15-30 minute PowerPoint presentation followed by a 15-30 minute question and answer session. In general, the research committee meeting will be closed door, with two exceptions: 1) the proposal; and, 2) the pre-defense, both of which are detailed below. These events are open to other members of the department; however, a closed-door RC meeting will take place following the proposal and pre-defense. The goals of the RC meetings are twofold: 1) to determine if the student’s project is feasible based on the resources available; and, 2) to assess the student’s progress towards project completion.

**Dissertation Committee:** The student will coordinate with their advisor to form a Dissertation Committee (DC) that will be proposed to the ECE Graduate Committee for approval. The dissertation committee composition follows the SoE guidelines: chaired by the advisor, the committee must include at least two ECE faculty members (including the advisor, if applicable), one member from outside the department but inside Tufts, and one additional person from outside of Tufts and is expected to be a recognized authority on the subject of the dissertation. The outside member is included in the committee in order to provide an objective and disinterested evaluation of the student's work. Once the committee has been formed, the outside member is expected to participate in giving the student the assistance and feedback necessary to assure that the dissertation meets the appropriate standards.

**Annual PhD Progress Report:** Each PhD candidate will be annually reviewed by the advisor, Research Committee, and the ECE department. This process requires the submission of the *Annual Progress Report*, available in the Appendices.

**Coursework:** PhD students in ECE must take at least eighteen credits beyond the MS degree. These credits include a minimum of six credits of lecture-based class work, two credits of ECE Seminar, and a dissertation. The dissertation effort is usually assigned ten credits. At least one credit of class-based course work should be taken from outside the department. For more detailed information, please visit the ECE web site.

**PhD Qualifiers:** Please see the details on the PhD qualifying exams available online at the following link: [http://www.ece.tufts.edu/forms/ECEQualifyingExamsPolicy.pdf](http://www.ece.tufts.edu/forms/ECEQualifyingExamsPolicy.pdf), which is updated each September. This exam is offered in January of each year. For students with an MS degree starting the PhD track in Spring, the qualifier exam must be taken in January of the following year. The RC meetings and the proposal timeline remains the same.

**PhD Proposal:** The purpose of the proposal is to verify that the students have a comprehensive understanding of the background material needed to perform their research project. The student will prepare a written document (up to 50 pages\(^1\), e.g., the first chapter of the PhD dissertation) that describes:

---

\(^1\) Single-column, 12 pt., Times, with 1.5 line spacing and one inch margin on all sides.
1) the context and motivation for performing this research; 2) the background information needed to understand the primary research question; 3) the prior-art in this research field on this primary question; 4) the specific question(s) this research will answer; 5) the materials, methods, and theoretical underpinnings to be used in this research; 6) the initial results; and, 7) a research plan and how the expected results relate back to the motivation. This document will be turned in to the student’s research committee at least two weeks prior to their planned meeting. Additionally, the student will prepare a 30 minute presentation on the proposed research to be presented to the research committee and public members of the department, followed by a private meeting with the research committee. This meeting takes the place of the standard research committee meeting for that year. NOTE: Many MS/PhD students may wish to defend their proposal shortly after defending their MS thesis. This is acceptable. The proposal may be defended any time prior to the end of their second summer as a PhD candidate. Additionally, if a student defended a master’s thesis in ECE on the same subject as their PhD research, then the RC may waive the proposal requirement for that student.

Pre-Defense: This extended RC meeting takes place 6-12 months before an intended defense date. The purpose is to finalize the department’s expectations about the graduate student’s research prior to defending their dissertation. The RC produces a document at the end of this meeting, which states work (specific goals) the student must finish before defending. These specific goals should include an agreement about the number of papers to be published prior to awarding the degree. Once these goals are reached the student is allowed to schedule their defense. The Pre-Defense is open to all of the members of the department. This meeting will take the form of a 30-45 minute lecture by the student, followed by questions, and then a closed discussion period with the research committee. It is recommended, but not required, that the eventual member of the PhD defense committee who is not on the Research Committee be present for this meeting (a conference/video call suffices). This meeting takes the place of the standard research committee meeting for that year. Students are responsible for the scheduling of their research committee meetings, proposal, and pre-defense, and for making sure an announcement on each event is sent to the whole department at least two weeks prior to the meeting.

PhD dissertation: As a general rule, PhD dissertations should be extended studies that go well beyond the scope of individual scholarly articles. They are expected to present a broad review of relevant literature and theory, to study extensively the problem posed and to place the results in a larger intellectual context. On occasion, the dissertation may substitute two to four less extended, original studies on closely related problems. Such a dissertation must be presented as a single document, must have a common general introduction and literature review, must have appropriate connecting matter and must have a general conclusion relating the results of the separate studies. The written dissertation is submitted to the DC at least two weeks prior to being publically defended in front of the DC.
1.3 Graduate Seminar Series

The department holds a weekly seminar series, which is a mandatory course requirement for all full-time graduate students. The focus is on research topics presented by outside guest speakers from academia and industry, interspersed with research topics presented by our own MS/PhD students. The seminars meet on Fridays from 1:45 to 3:00 p.m. in Halligan 102. A list of the speakers for the 2016-2017 academic year will be available on the ECE website (http://www.ece.tufts.edu/colloquia) as soon as the schedule is set. If you would like to receive email notifications of upcoming colloquia, please send email to colloquia@eecs.tufts.edu. Announcements will be posted at the building entrance a few days prior to the seminar, and you will also get a reminder by email. You must register for this half-credit course each semester (EE-191 in the Fall and EE-192 in the Spring) that you wish to receive academic credit.

It is expected that all graduate students schedule a time to present a research topic before they graduate. Typically, this occurs during the student's second year after sufficient research progress has been made.

1.4 Advising

Registration is done online via the SIS system; however you must make an appointment with and meet your advisor before you are allowed to register for classes. In the event that you do not know who is your advisor is, please contact Miriam Santi (miriam.santi@tufts.edu).
2 Teaching Assistant And Research Assistant Guidelines

Graduate Research Assistants (RA) and Teaching Assistants (TA) are expected to fulfill a total of 20 hours a week for their assigned faculty members. For TAs, this includes duties such as running laboratories, grading, holding office hours, leading review sessions, assisting the professor in developing labs and homework assignments, posting solutions and proctoring examinations. For RAs, activities include both performing research as well as reporting on the results through the writing of peer-reviewed journal and conference papers and presentation of the work at conferences, group meeting, seminar, etc.

Each semester, the manager of graduate students and/or the faculty will review the evaluations of all department-funded TAs and RAs. Should a student receive an unsatisfactory review, the student's support will be terminated and the student must find his/her own financial support to continue in the program.

The following guidelines are meant to help students understand the expectations and responsibilities of an Electrical and Computer Engineering Department TA/RA.

- All TA/RA's are expected to work 20 hours a week during the school year and work full time during the summer.
- All TA/RA's must attend the graduate seminar every week.
- Outside jobs are not allowed. Should the TA/RA find a part-time position in industry, he/she must relinquish RA/TA support. The department will not coordinate TA/RA hours around work schedules.
- The student's teaching schedule is to be coordinated with the professor and around the TA/RA's class schedule. This includes specific duties such as office hours and specific grading instructions.
- TAs and RAs are responsible to the department from the time classes start (start of payroll) until the semester is over, not at the end of classes. This is true at the end of the school year in May. A TA or an RA must have permission from the department to arrive late or leave early from campus.
- The TA should meet with their faculty at least once a week and be responsive to their faculty's email.
- All TAs will have posted office hours, on the class web page, on their office door and in the ECE office. TAs will be in their office during these hours, or close by where students can find them.
- In the case of schedule changes due to holidays, students are expected to follow the replacement day schedule. For instance, if you hold office hours on Mondays, and due to a holiday, Monday's schedule occurs on Wednesday, you will be expected to hold office hours on that Wednesday.
- If a laboratory does not run each week, the responsible TA is still expected to serve 20 hours and be available in their office during that time to help students and be available to their faculty members.
- TAs must be flexible to answer questions for students in regards to all aspects of the class, whether it be laboratories or homework.
- Homework assignments and labs are to be graded and given back to the Instructor no later than one week after it was due. The homework should be given back BEFORE the class occurs on the seventh day, so that the instructor can give back the old assignment and give out the new one on the same day.
- Questions sent via email to TA's from students should be acknowledged by the TA. This means that students should receive some response in a timely fashion. If the same questions are being asked by many students, then the TA should alert the professor, so the professor can clarify or answer the question in the classroom.
- TAs should alert the professor to any plagiarism or cheating issues and discuss the situation with the professor before taking any action against the student.
- At the end of each semester, faculty will complete reviews for all departmental funded Teaching and Research Assistants. Should the TA or RA receive an unsatisfactory review, a recommendation to the department chair will be issued to revoke the student's support. A copy of this sheet is included so
that students see how their performance will be evaluated.

3 Facilities

3.1 Halligan Hall

Faculty offices are located on the first and second floor of Halligan Hall located. The classrooms where most of the ECE courses meet are on the first floor. Currently, room 137 is assigned to graduate TAs. Due to limited space, we are unable to provide office/desk space for our non-funded graduate students. You may use the Graduate Lounge/Kitchen of the common space on the second floor of Halligan for study purposes between classes if these areas not reserved or occupied. Below is a list of computer/electronic/research labs with a brief description of their main functions and/or equipment.

- **103 Multimedia Lab** - Senior Design Lab
- **112 Research Lab** - Microwave engineering and parallel computing
- **116 & 118 Computer Lab** - 20+20 Redhat Linux workstations for general course use
- **120 Computer Lab** - 20 Windows PCs for general computing course use
- **121 Research Lab** - Human Computer Interaction projects
- **122 Computer Lab** - 20 Windows PCs for general computing course use
- **139 &141 Microwave Research Lab**
- **223 & 225 Electronics Course Lab** - EE bench lab for entry level EE courses
- **227 Research Lab** - Computer engineering simulation lab
- **229 Controls Lab** - Computer engineering bench lab

Access to Halligan Hall and the computer labs is available to all ECE majors, graduate students and students enrolled in ECE courses for the fall and/or spring semesters. Students may request access at the ECE main office within a week or two of enrolling for classes. Computer accounts on the department's UNIX system will be issued automatically during the first week or two of classes. If you need access to other labs, please check with the Department Office.

3.2 Additional Lab Space

- **161 College Ave - Halligan Hall**
  - **Hempstead Lab** - Power-Aware Computing Lab (Room 105)
  - **Panetta Lab** – Simulation Laboratory (Room 236)
  - **Stanković Lab** – Energy Systems (Room 141)
- **550 Boston Ave.**
  - **Afsar Lab** - Millimeter and Submillimeter Waves Laboratory
- **574 Boston Ave.**
  - **Khan Lab** - Signal Processing And Robotic Networks (SPARTN)
- **200 Boston Ave. – Advance Technology Center**
  - **Koomson Lab** - The Advanced Integrated Circuits and Systems Lab
  - **Sonkusale Lab** - Nano Lab
  - **Vandervelde Lab** – Renewable Energy and Applied Photonics (REAP) Labs (Suite 3600)
  - **Vandervelde/Grossklaus** – Tufts Epitaxial Core (TEC) Facility
- **196 Boston Ave., 4th floor - Interdisciplinary Laboratory for Computation**
  - **Miller Lab** - Laboratory Imaging Science Research (LaISR)
  - **Khan Lab** - Signal Processing And Robotic Networks (SPARTN)
3.3 The Tufts Campus

For those of you have just arrived on campus, we advise that you get acquainted with the rest of the campus in relation to Halligan Hall; particularly with the Tisch Library, Campus Center, Ballou and Dowling Halls. Campus tours are offered to the general public on a daily basis throughout the year.

3.4 Library Facilities

The Tisch Library is the main university library supporting the research needs for faculty and students and is the primary source for full-text journals, indexes and electronic databases. The library houses over 785,603 books, over 200 electronic databases, 1,500 journal titles (electronic and in print) and 14,000 videos. Your Tufts I.D. card will allow you to check out books, videos or order material/books through the inter-library loan system. The library provides lockers for students on a first-come basis – first-serve basis. Please refer to the library’s website for information about training and an overview of the facilities.

4 Miscellaneous

Mailboxes: All full time graduate students have mailboxes that are located in 101 Halligan, and are accessible during ECE office hours, (Mon-Fri, 9am – 5pm).

Housing: If you have not yet found accommodations within the area, a limited number of on-campus living quarters may be available through the Office of Residential Life. In addition, they offer useful information about off campus housing, specifically listings and information pertinent to typical rental fees, security deposits and the rights and responsibilities of renting in the metropolitan and suburban Boston area.

Health Services: Tufts University Health Service located at 124 Professors Row provides accessible and high-quality health care for undergraduate and graduate students. They strive to maintain the physical, psychological, and social health of our students through an interdisciplinary team approach of providing primary care and promoting health education and wellness. To schedule an appointment, call them at 617-627-3350. Tufts Health Services has physicians on-call when their facilities are closed, even on Sundays. You can reach the physician on-call by dialing the Tufts Police at 617-627-3030 and asking them to page the physician.

Descriptive title of research:

I. Research Committee Questions:
(If any answers are “No,” then describe the action to be taken)

Project feasibility questions:
1) Is the project well defined with a reasonable scope/vision of the work to be done?

2) Does the student possess the base knowledge and abilities needed to tackle this project?

3) Is there sufficient funding to complete the project?

4) Are the required resources (tools, computational time, etc.) readily available to the student?

Project progress questions:
5) Has the student garnered the skills (e.g. clean room training) needed to complete this project?

6) Has the student met important milestones towards the completion of this project?

7) Has the student presented this research at any conferences?

8) Has the student written any peer reviewed journal articles on this research?

9) Has the student won any awards?

10) Is the student’s progress satisfactory?

11) Has the student shown initiative in following new research directions based upon results? __________
II. Research Goals and Milestones: (From Progress Report Form)
Student’s Research Goals for this year (as stated on last year’s Research Progress Form):

Were all these goals met? Why or why not?

Student’s Research Goals for next year:

III. Evaluation
The student’s research progress towards the PhD:
Exceeded expectations
Met expectations
Did not meet expectations

Met expectations
Did not meet expectations

To be copied from the latest Research Progress form, please check the appropriate line
Please attach the research progress form filled by the Research Committee.

The Research Committee evaluates that the student’s research progress:
Exceeded expectations
Met expectations
Did not meet expectations

Based on the student’s progress, advisor’s remarks, and the Research Committee reports, the ECE Department will evaluate the PhD progress to be satisfactory or unsatisfactory. This evaluation will be made available to the advisor and the student before the first day of class of each spring semester.

Please note that getting two unsatisfactory reports may result in the termination of your PhD studies, regardless of your PhD qualifier results.
